Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A. - not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.

Notes: L - less than \$500,000 in nominal or real GSP; N.A.- not available, not applicable. * This industry has come to be dominated by mutual funds. Large capital gains--particularly in the mid-1990s--may have had an exaggerated effect on the adjustment of property income. This means that the numbers for the middle years may be unrealistically low, thereby underestimating the relative importance of this industry.
