Introduction

Ohio Imports 2010

Executive Summary

Ohio merchandise imports were valued at \$53 billion in 2010, an increase of 23.5 percent from 2009. By comparison, the United States experienced a 22.6 percent increase in imports since 2009.

According to this report, in 2010:

- Ohio was the 11th largest importing state.
- 164 countries and territories were points of origination.
- 7 countries shipped over \$1 billion in merchandise to Ohio.
- 41 of the 98 commodity groups recorded imports exceeding \$100 million with 15 surpassing \$1 billion.

Leading Origins:

- Imports from Canada totaled \$14.3 billion, 27 percent of the state figure. By comparison, U.S. imports from Canada were 15 percent of the national total.
- Shipments from Mexico totaled \$5.5 billion, Ohio's third largest origin, an increase of 32 percent from 2009.
- Asian and Southeast Asian countries accounted for 38 percent of Ohio's imports. The region's largest origins were China (\$9.5 billion) and Japan (\$4.8 billion). Total shipments from the region were up 18 percent compared to 2009.
- European countries shipped 19 percent of Ohio's imports. The three largest sources of imports were Germany (\$3.2 billion), Ireland (\$1.5 billion), and France (\$1.2 billion). Total shipments from the region were up 18 percent compared to 2009.
- Imports from Africa accounted for 2 percent (\$965 million) of the state figure, an increase of 38 percent over the year. Shipments from Central and South America account for 1.4 percent share of Ohio's imports each.

Top Products:

- Machinery was Ohio's leading import (\$8.7 billion). Ohio was 8th among the 50 states in this category with 3.5 percent of the U.S. total.
- The top six categories (machinery, mineral fuel/oil, electrical machinery, vehicles, knit apparel, and optics) accounted for 53 percent (\$28.0 billion) of the state total.
- Virtually all categories experienced an increase from the economic downturn in 2009. Iron & steel, vehicles, and organic chemicals saw the largest percentage increases at 124 percent, 55 percent, and 50 percent respectively.

Paper, Paperboard	12th	2.9%	California	11.8%

Size, Growth, and Concentration are three types of measures used to assess the importance of an import to a state's economy.

In the "circle chart" that follows, circles are sized in proportion to total import value. Machinery, the 2010 value leader, is represented by a circle with the largest diameter --- machinery is followed by mineral fuels/oil and electrical machinery.

Growth is measured by the percentage change in product sales value from 2008 to 2010.

Concentration is a measure of a product's share of total state imports compared to the product's share of U.S. imports. The larger the concentration ratio, the more Ohio is involved with importing that product. (In the chart, the larger the concentration ratio, the higher the center of the circle.)

Iron and steel is the 7th largest Ohio import product group and is highly concentrated with a ratio of 3.5 (iron and steels' share of Ohio's import total is three-and-a-half times greater than iron and steels' share of U.S. imports).

The table that follows the circle chart includes products with more than \$90 million in 2010 total import value. The table is organized by degree of concentration and then sorted by growth from 2008 to 2010.

Canada is the leading source of imports in 24 out of the 46 largest product categories. China is the leading source for 14 categories while Mexico heads 3 categories.

The last column lists growth markets. Selection took into account both absolute growth and percentage change from 2009 to 2010 as well as past trends. Growth markets vary widely. Canada had 21 entries while China had 12

Guide to Import Data

Prepared by the U.S. Department of Commerce, International Trade Administration

State of Destination (SD) Series: In the mid 1980s state data based on the import state of destination were added. However, in 1988, release of the data on import state of destination was discontinued due to quality concerns. Since then changes to the import reporting requirements along with growth of electronic reporting and a better understanding of the data's limitations has made it possible to bring back the import state of destination series.

Effective with January 2010 statistics, this new SD series will be available. A new supplement will be added to the FT900: U.S. International Trade in Goods and Services. In addition the following data products will be produced: Import state data by 6-digit Harmonized System (HS) and Import state data 4-digit North American Industry Classification System (NAICS). An example of the data structure for these files can be found on our website. Historical data tables and products will be made available for monthly data back to January 2008.

This new series is based upon the U.S. State of Destination Code. This is defined as the U.S. state, U.S. territory or U.S. possession where the merchandise is destined, as known at the time of entry summary filing. If the contents of the shipment are destined to more than one state, territory, or possession, or if the entry summary represents a consolidated shipment, report the state of destination with the greatest aggregate value. If in either case, this information is unknown, the state of the ultimate consignee, or the state where the entry is filed, in that order, should be reported. However, before either of these alternatives is used, a good faith effort should be made by the entry filer to ascertain the state where the imported merchandise will be delivered. In all cases, the state code reported should be derived from the standard postal two-letter state or territory abbreviation. For shipments into FTZ's, the import state represents the location of the zone.

In certain cases, the state of destination may not reflect the final location for which the imported goods are destined. Rather for these shipments, the state of destination, as known at the time the entry documentation is filed, may reflect an intermediary, storage or distribution point. From there, these shipments may later be distributed to another location in another state as the ultimate destination. For example, a consolidated shipment of many automobiles may be shipped by the importing company to a distribution point in one state with the intent of later shipping the automobiles to numerous states for final sale.

For additional information on the State of Destination series, visit the Census Bureau's website at <http://www.census.gov/foreign-trade/aip/elom.html> .
